

Krakow Triple Telescope Array for experiments at GSI

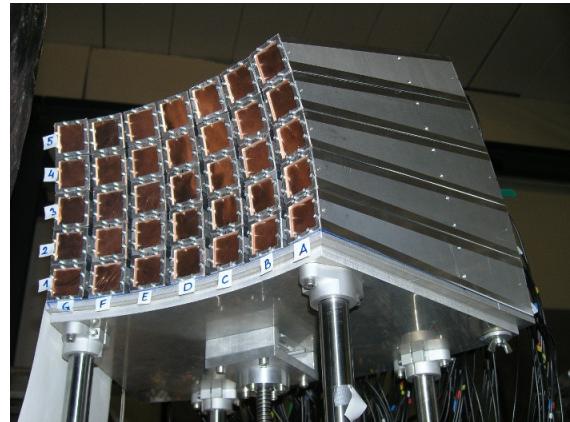

Sebastian Kupny
sebastian.kupny@uj.edu.pl

II Symposium on Applied Nuclear Physics and Innovative Technologies
Kraków, 24.09.2014

INTERNATIONAL PHD PROJECTS IN APPLIED NUCLEAR PHYSICS AND INNOVATIVE TECHNOLOGIES

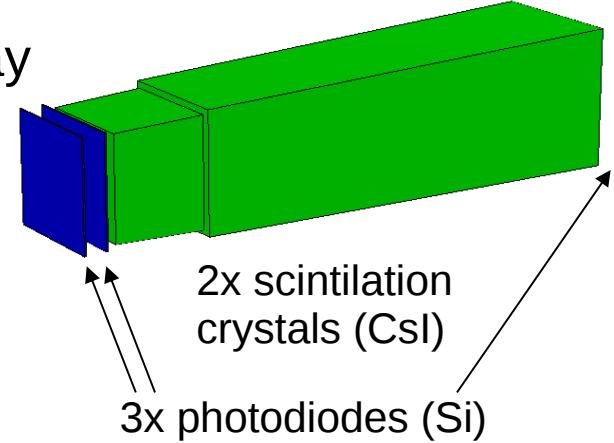

This project is supported by the Foundation for Polish Science – MPD program, co-financed by the European Union within the European Regional Development Fund

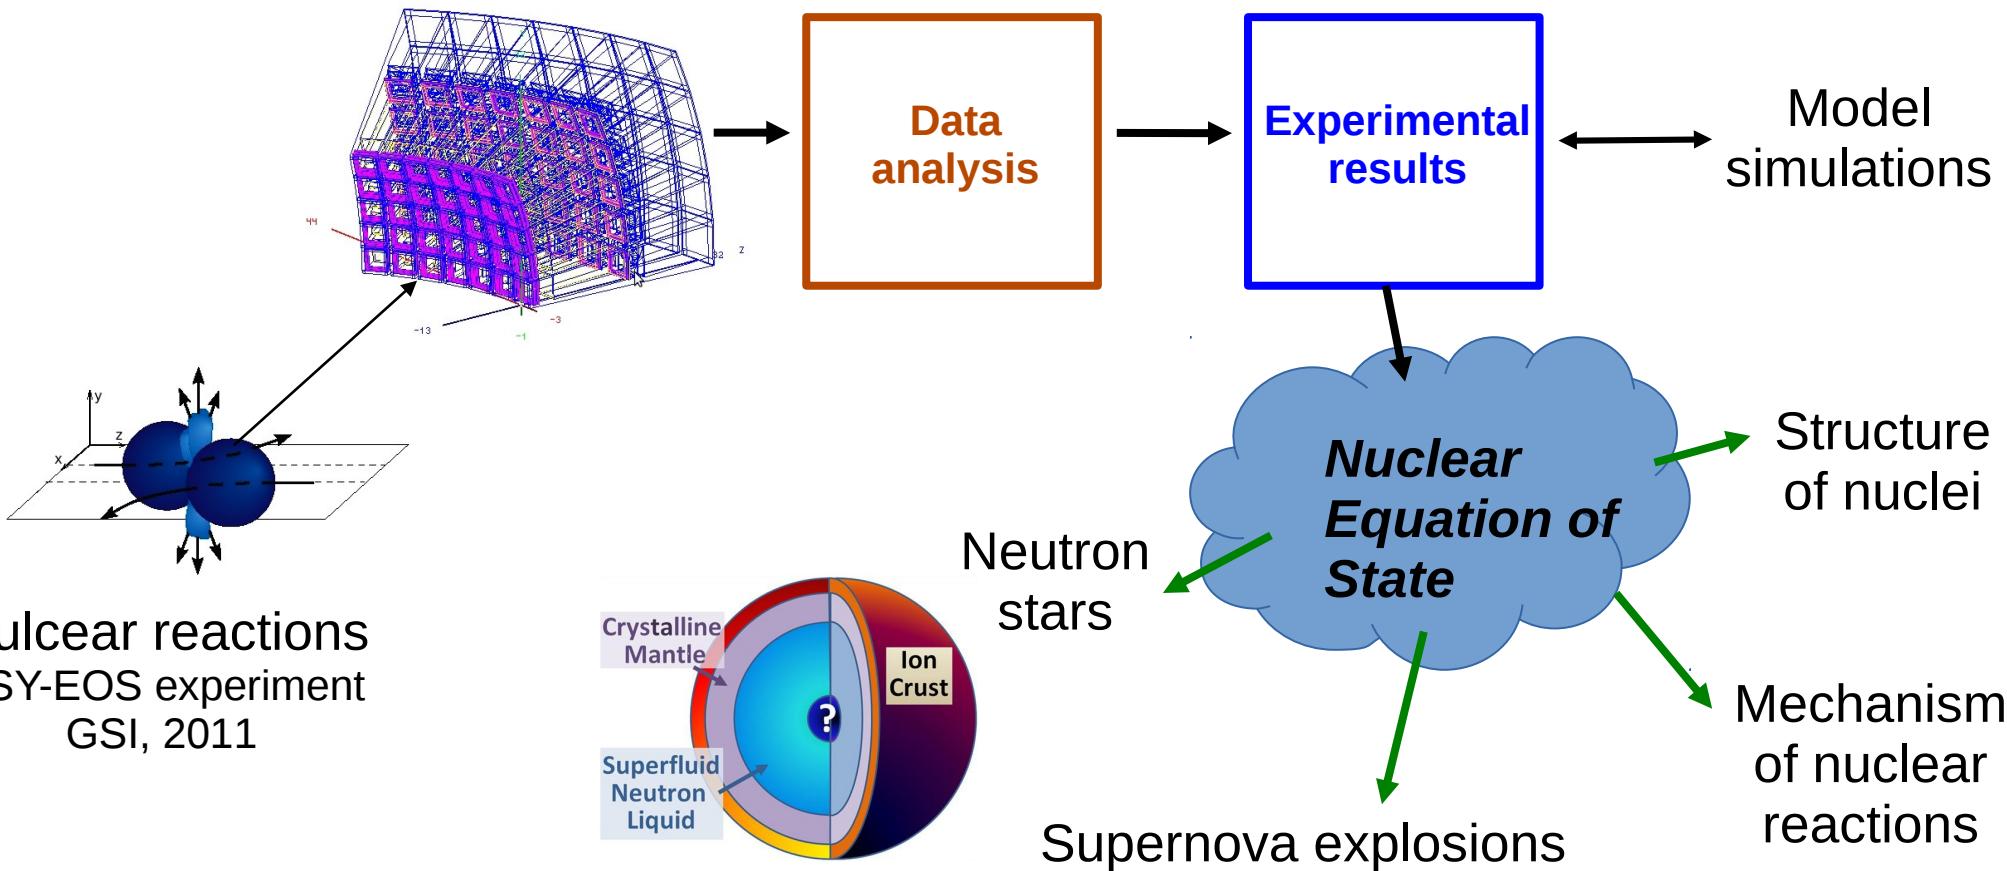

KRATTA

KRAkow Triple Telescope Array

- Detection of light charged particles with isotopic resolution
- 35 telescope modules
- Broad energy range

Detection

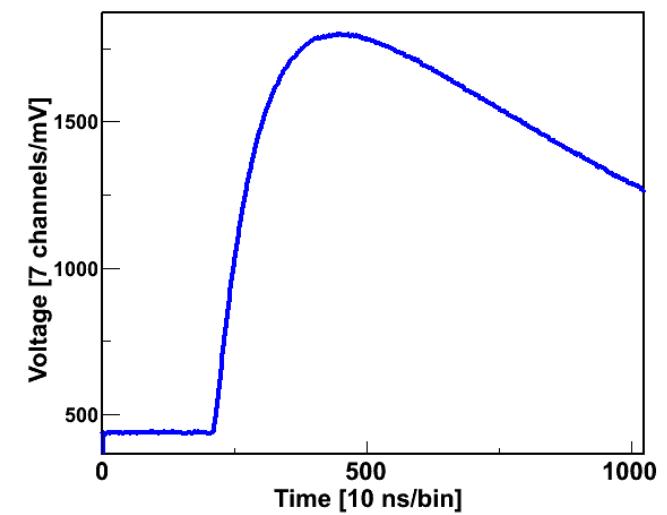

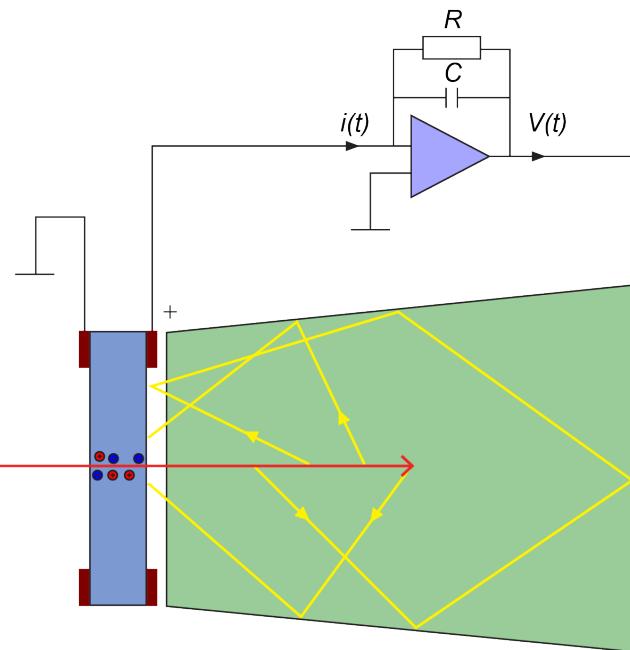

KRATTA

Single Chip Telescope technology

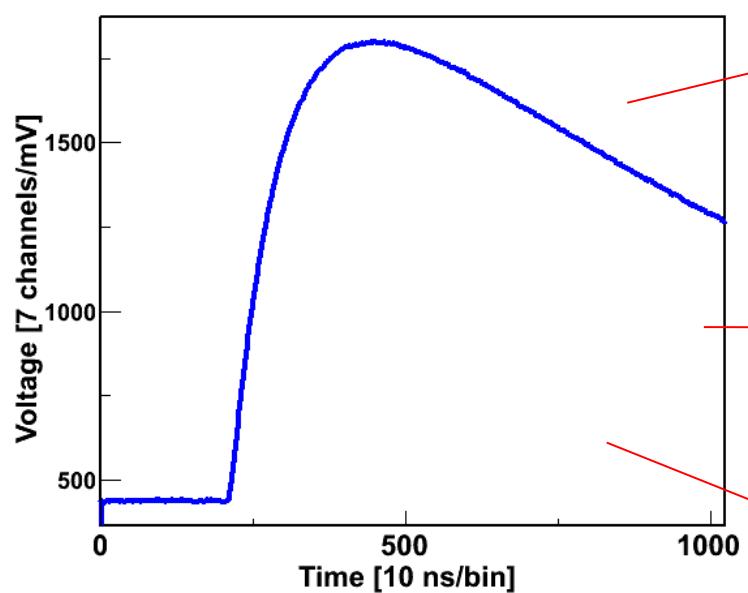

- Whole pulse shape registration
- Registered pulse shape is a sum of three components (ionization and two scintillation)

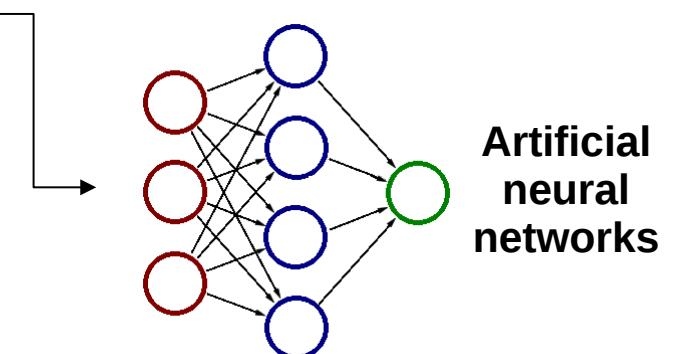

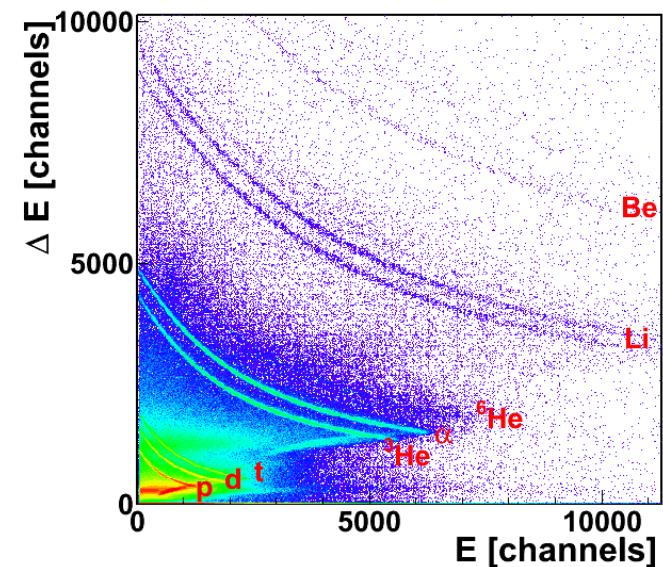

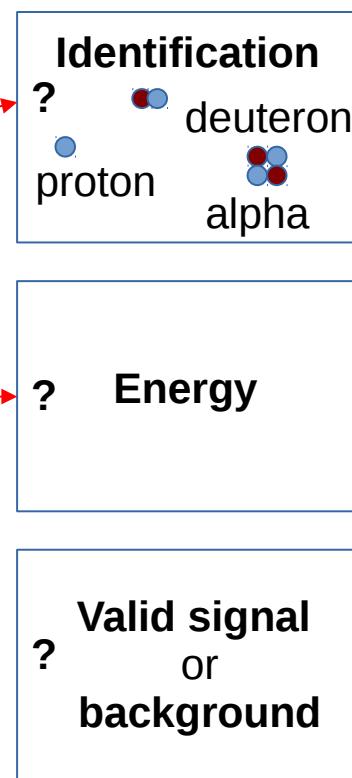

KRATTA

Data analysis

Pulse shape analysis

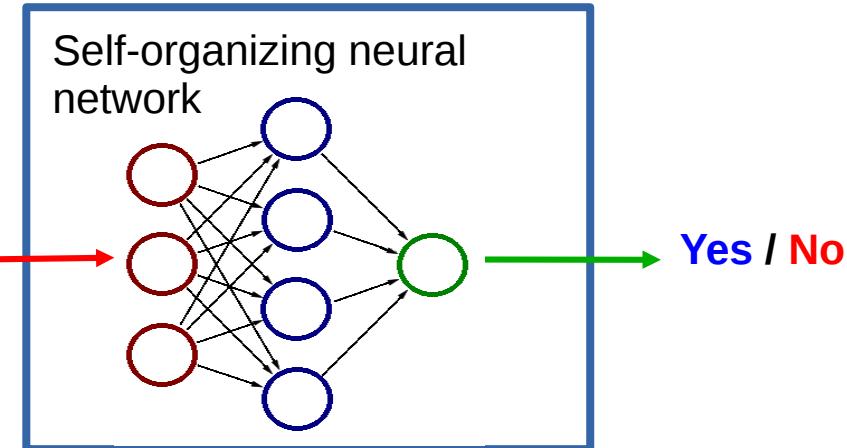

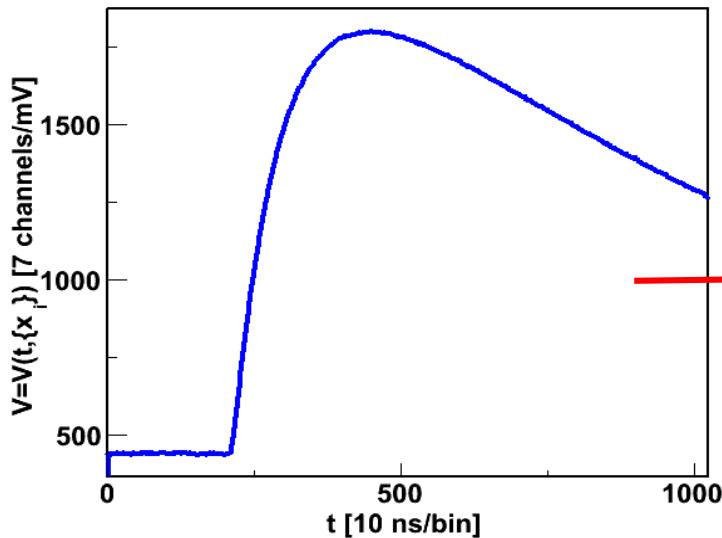

Artificial
neural
networks

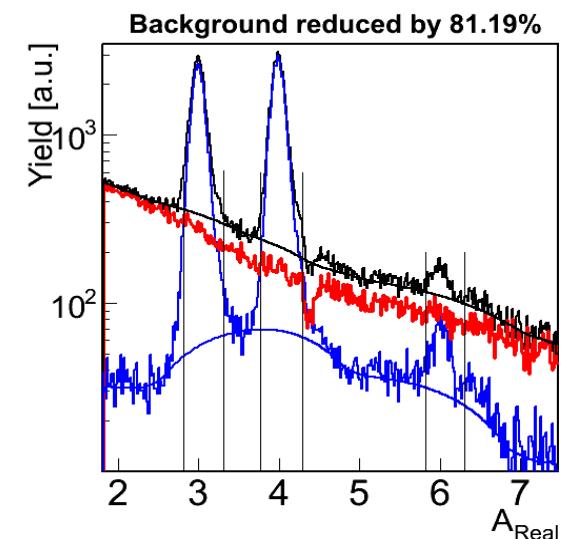

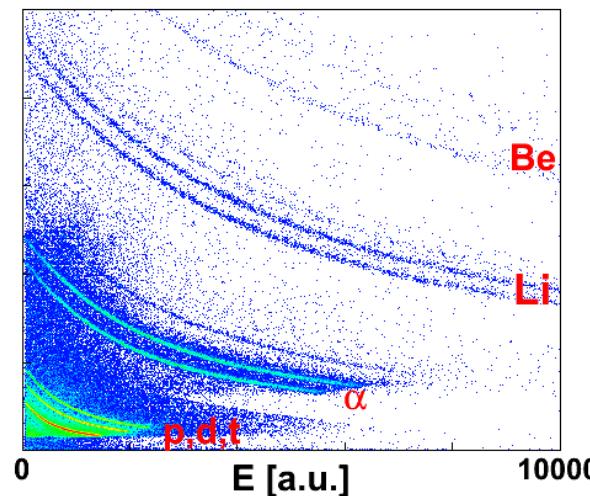

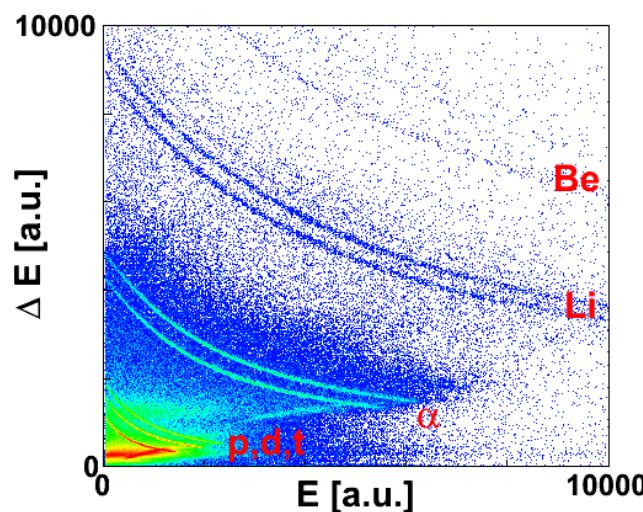

KRATTA

Background reduction with artificial neural networks

Is a valid signal or background?

ΔE - E identification map before and after background reduction

KRATTA

Summary

- ◆ A new modular system for detection of charged particles in a broad energy range has been built
- ◆ innovative SCT technology used
- ◆ designed and used for the purpose of the ASY-EOS experiment
- ◆ good detector performance
- ◆ provides unique data which allows to study the properties of the nuclear matter and to constrain the theoretical models

Thank you for attention

The ASY-EOS collaboration
